

WHAT IS CLAIMED IS:

1. A portable terminal with camera, comprising:
a first housing and a second housing which are movably connected to each other;
an image pickup device which is arranged in one of the first housing and the second housing; and
a conversion lens which is arranged in the other of the first housing and the second housing,
wherein in a first state where the first housing and the second housing are laid on each other, the image pickup device and the conversion lens have an identical optical axis so that a focal length of the image pickup device is converted from a focal length in a second state where the first housing and the second housing are arranged to each other differently than the first state.
2. The portable terminal with camera as defined in claim 1, further comprising an audio transmitting and receiving device.
3. The portable terminal with camera as defined in claim 1, further comprising another conversion lens changeable with said conversion lens by sliding operation, wherein the focal length of the image pickup device is converted into one of lengths by selecting one of the conversion lenses.
4. The portable terminal with camera as defined in claim 1, wherein the conversion lens is a zoom lens.
